Education

[Solutions Architect Professional](#)
2025

[DevOps Engineer Professional](#)
2024

[Solution Architect Associate](#)
2022

Hashicorp: Terraform Associate
2022

FinOps Certified Practitioner
2024

Sheffield Hallam University

BSc Business & ICT (2:1)
2011-15

Haslingden High School / Sixth Form

A-Levels: A*, A, C

GCSE: 11 (A*-C)

Security Clearance

NPPV 2 / CTC level
NSV CLEARANCE LEVEL SC
BPSS

Software Experience

Windows
Linux (Ubuntu / Amazon Linux)
Terraform / CDK / Cloudformation
Ansible
Windows Server (AD, GP, DNS, DHCP, DFSR, WDS, WSUS) (2003-2019)
AWS (CloudFront, Lambda, EC2, ECS Fargate, RDS Aurora, API Gateway(Private/Rest), Step Functions, SQS, Bedrock, Kinesis Data Streams, IAM Identity Centre, WAF, Firewall Manager, Config, SES, Route 53, CloudWatch, QuickSight, Athena)
Azure AD
Docker
Grafana
Git
Github Actions
Bitbucket Pipelines
Veeam
IIS & NGINX
SQL (MariaDB / Postgres)
Python
Bash

Experience

Awaze / DevOps Engineer/ Sep 2023 - Current

- Migrated IAM users to AWS IAM Identity Centre, centralising SSO and permission sets across multiple accounts, eliminating static access keys, and implementing TEAM for time-limited production privilege escalation – locking standard access to pipelines and breakglass only.
- Played a pivotal role in delivering the Akamai to CloudFront migration, translating complex multi-environment configurations into reusable Terraform modules and enabling teams to self-manage their own CDN for the first time.
- Built a serverless AI image analysis pipeline (Lambda, Bedrock, SQS, Step Functions) extracting structured metadata from millions of property listing images that previously had none.
- Migrated a full engineering team into a dedicated AWS account – RDS Aurora, ECS frontend, private API Gateways, handing over a fully self-sufficient platform for the team to own independently.

Stagecoach / Cloud Engineer/ Jan 2023 - Sept 2023

- Built an automated Veeam for AWS platform to standardise backup appliances across AWS; introduced Bitbucket Pipelines and a reusable OIDC Terraform module for AWS environment access, improving the team's security footprint.

Awaze / Infrastructure Engineer/ Sep 2021 - Jan 2023

- Led IaC adoption within an operations team using Terraform, Git, and GitHub Actions, replacing manual infrastructure deployments.
- Designed and deployed a 1Password SCIM bridge on ECS Fargate to automate group provisioning from Active Directory.

Informed Solutions / Infrastructure Consultant/ Nov 2017 - Sep 2021

- Maintained and enhanced a multi-environment serverless government platform (Lambda, ECS Fargate), covering CI/CD, CloudWatch monitoring, and cross-team support.
- Migrated a Windows Server 2003 data centre to a hardened AWS/Windows Server 2016 environment, covering 20,000+ AD users, objects, and group policies.

One Iota / Technical Support Agent / Aug 2015 - January 2017

- 3rd line support for major global retailers; on-site installation of signage and interactive POS systems; QA across web, mobile, and interactive platforms

WDSI International / Technical Support & Engineer / July 2013 - July 2015

- Part of the engineering team for a full stadium WiFi deployment; provided critical support during a major international sporting event.event.
